—: What is a Recursion :—

- Function Calling itself is called recursion.
- A recursive method solves a problem by calling a copy of itself to work on a smaller problem.
- It is important to ensure that the recursion terminates.
- Each time the function call itself with a slightly simpler version of the original problem.
- Recursive Code is generally shorter and easier to write than iterative Code.
- Solution to some problems are easier to formulate (solve) recursively.

—: How to approach a Recursive Problem? :—

Using Three Steps:—

- i) Suppose karna hai ki function ban chuka hai. and then ye pata karna hai ki function kya kya krta hai.
- ii) Recursive Case ke bare me Sochna hai ki kaise likhe.
- iii) Base Case ke bare me Sochna hai ki recursion end kab ho.
